

# Why improve Farm Dams? Field Day

Come and hear how you can improve your dams, and improve water quality, increase biodiversity and reduce emissions.

Martino Malerba from the Blue Carbon Lab at Deakin University will be speaking on how enhancing farm dams:

- Improves water quality, and stock health
- Provides habitat for wildlife
- Reduces greenhouse gas emissions

We'll also hear about opportunities for farmers to participate in Deakin's upcoming farm dam research program.

We'll visit local dairy farmer Glenn Duncan's property, see what has been done to improve his farm dam and what are the benefits from a farmers perspective.

We'll also hear from Melbourne Water on opportunities for farmers to undertake works on their dams and waterways.

## When

Thursday, 30 March 2023  
10.15am registration  
10.30am-1.30pm (lunch included)
